Note: The DB2015 rankings are benchmarked to June 2014 and based on the average of each economy's distance to frontier (DTF) scores for the 10 topics included in this year's aggregate ranking. The distance to frontier score shows the distance of each economy to the "frontier"—which represents the best performance observed on each of the Doing Business indicators. The measure is normalized to range between 0 and 100, with 100 representing the frontier. For the economies for which the data cover 2 cities, scores are a population-weighted average for the 2 cities. An upward arrow indicates an improvement in the aggregate score between 2013 and 2014 (and therefore an improvement in the overall business environment as measured by Doing Business), while a downward arrow indicates deterioration in the score and a dash indicates no change. The rankings and scores for both years are based on the new methodology.

1. The DB14 rankings and distance to frontier scores reflect data revisions and methodology changes.
